

Rhinestone Transfer Application Instructions

Also view these instructions with pictures at www.JubileeRhinestones.com/instructions

1. Select a porous fabric or surface to apply your motif, such as a garment or ribbon. **TEST YOUR PRODUCT FIRST TO BE SURE IT CAN WITHSTAND THE HEAT OF THE IRON.**
2. Set your iron to a medium-high setting (wool or cotton). Turn the steam OFF. Set a heat press to 350 degrees. Place the fabric to receive the transfer on a firm, flat surface. Iron the fabric before applying rhinestones.
3. Insert a piece of paper between the front and back of the garment so the glue will not seep through to the back side.
4. Inspect the rhinestone design. On a hard surface, press fingernails over the plastic to nudge offset stones back into position. If necessary, trim the transfer with scissors.
5. Peel the white paper backing off the plastic transfer paper. Place the transfer sticky side down on the fabric. It may be gently removed and repositioned at this point. Inspect the stone layout once more before ironing.
6. Confirm that your iron is still HOT and has not cooled down or turned off. Iron the transfer with firm, even pressure. Do not wiggle or slide the iron. Heat all areas about 10-15 seconds depending on the size of the stones. Larger stones take more time; metal studs take less time. The stones under your iron's vent holes will not receive pressure, so reposition the iron once or twice to compensate.
7. Let the plastic cool to room temperature. Gently and slowly peel the plastic away. The stones will remain on the fabric. If any stones are lifted up, replace the plastic and re-iron the areas where the stones were lifted.
8. When the plastic is removed, briefly press the iron to the stones one more time to reset any that may have loosened.
9. To prolong the life of your bling garment, machine-wash it inside-out on a gentle, cold cycle. Lay flat or hang to dry.
